

\$108-60W v1.0 \$108-60W 10-ports switch for 8 IP cameras

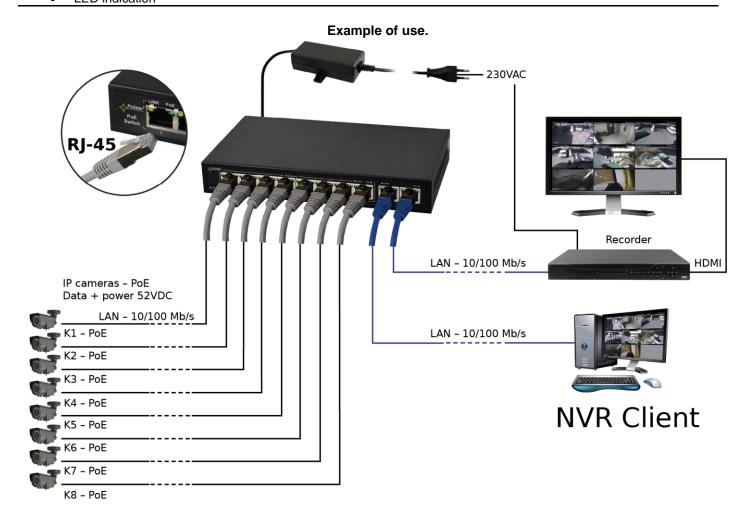

Edition: 1 from 07.03.2018 Supercedes the edition: ------

EN**

Features:

- Switch 10 ports
 8 PoE ports 10/100Mb/s (data and power supply)
 2 port 10/100Mb/s (UP LINK)
- 30W for each PoE port, supports devices complaint with the IEEE802.3af/at (PoE+) standard
- Supports auto-learning and auto-aging of MAC addresses (1K size)
- LED indication

- The PSD520115 52VDC/1,15A/60W max. power supply desktop type included
- · Additional assembly elements
- warranty 2 year from the production date

1. Technical description

1.1. General description.

S108-60W is a 10-ports PoE switch designed to supply IP cameras operating in IEEE 802.3af/at standard.

Automatic detection of any devices powered in the PoE/PoE+ standard is enabled at the 1 – 8 ports of the switch. The UP LINK

ports is used for connection of another network device via RJ45 connector. The LEDs at the front panel indicate the operation status (description in the table below).

The PoE technology ensures a network connection and reduces installation costs by eliminating the need to supply a separate power cable for each device. This method allows supplying other network devices, such as IP phone, wireless access point or router.

1.2 Block diagram.

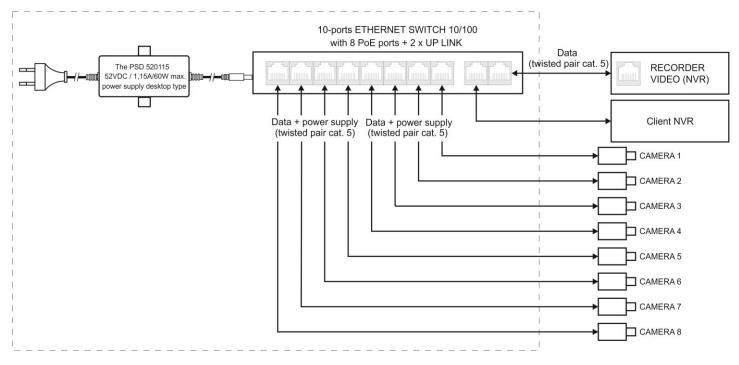

Fig. 1. Block diagram.

1.3 Description of components and connectors.

Table 1. (See Fig. 2)

^{*} The given value of 30W per port is the maximum value. The total power consumption should not exceed 48W when all PoE ports are being used.

2. Installation

2.1. Requirements

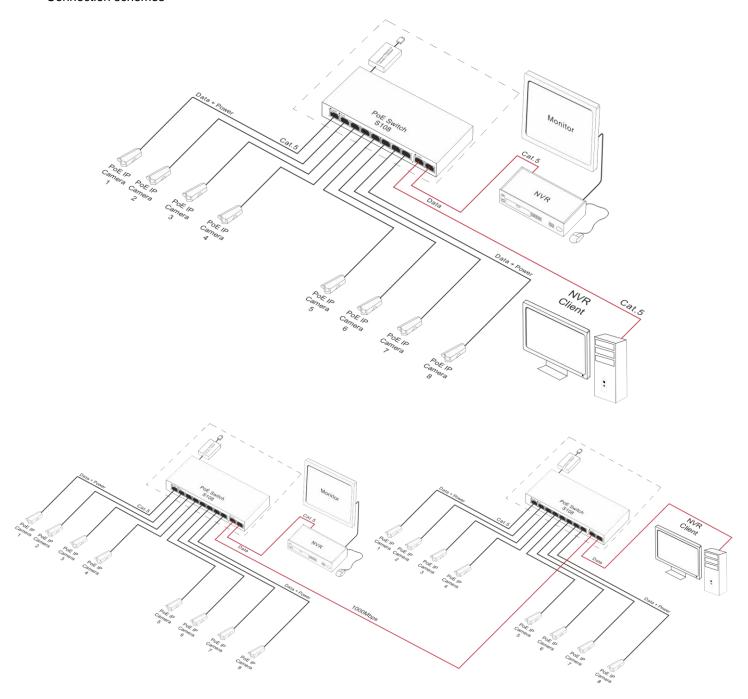

The unit should be mounted in confined spaces, in accordance with the 2nd environmental class, with normal relative humidity (RH=90% maximum, without condensation) and temperature from -10°C to +40°C. Ensure the free flow of air around the unit. The PSU shall work in a vertical position that guarantees sufficient convectional air-flow through ventilating holes of the enclosure.

The switch load balance should be done before installation. The given value of 30W per port is the maximum value referring to a single output. The total power consumption should not exceed 48W when all PoE ports are being used. The increased demand for power is particularly evident in the case of cameras with heaters or infrared illuminators - when launching these features, the power consumption increases rapidly, which may adversely affect the operation of the switch. As the device is designed for a continuous operation and is not equipped with a power-switch, therefore an appropriate overload protection in the power supply circuit should be provided. The electrical system shall be made in accordance with applicable standards and regulations.

2.2. Installation procedure

- 1. Connect switch to the PSD520115 52VDC power supply unit desktop type.
- 2. Connect the power supply to the AC 230V socket.
- 3. Connect the camera wires to the RJ45 connectors (connectors PoE).
- 4. Check the optical indication of switch operation (see Table 3).

Connection schemes

3. Operation indication.

Table 3. Operation indication

OPTICAL INDICATION AT THE POE PORTS (1÷8)

GREEN LED LIGHT (PoE) Indication of the PoE power supply at the RJ45 ports	OFF- no power supply at the RJ45 port (the device is not connected or not compliant with the IEEE802.3af/at standard) ON – power supply at the RJ45 port Blinking – short-circuit or output overload
YELLOW LED LIGHT (LINK) The connection status of LAN devices 10/100Mb/s and data transmission	OFF- no connection ON - the device is connected 10/100Mb/s Blinking – data transmission

OPTICAL INDICATION AT THE UP LINK PORTS Applies only to the right side port: No light (OFF) - No supply voltage of the switch

ON - the switch is powered, correct operation
